Pages E839-E845: M. L. Adamo and R. L. Hazelwood. "Specific neuropeptide Y binding sites in chicken brain." Page E843, Fig. 5, A, B, and C. The ordinate was incorrectly labeled. The correct label is $\log [(100 - \%B/B_0)/(\%B/B_0)]$. Also, the last line of the legend should read B/B_0 , specific binding at a given concentration of unlabeled competitor to specific binding in the absence of unlabeled competitor ratio. Note that the calculations for the data presented on the ordinate were made according to the correct formulation given above, and therefore this correction does not alter the curves, the coefficients calculated therefrom, or the conclusions reached on the basis of these data.
